

Solar cars designed according to Adventure Class specifications are typically cars that do not fit into Challenger nor Cruiser Class specifications.

These solar cars may have one or more occupant spaces (including that of the pilot) and may have three or more wheels with solar collectors mounted on the upper surface of the vehicle.

This class is typically for hobbyists and project car enthusiasts that push the boundaries of innovation and design that want to compete and test their vehicles but aren't able to conform to competing class specifications.

This class is non-competitive and is ideal for passionate first-timers or renewable motoring enthusiasts.
